## HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

***Reasons for Allowance***

**Claims 15-17** are allowed.

The following is an examiner's statement of reasons for allowance:

Applicant's invention is drawn to a transmitting apparatus with a spreading section that generates a predetermined number of spread signals, each of the predetermined number of spread signals being generated by performing spreading processing on a retransmission signal using a different spreading code, wherein the predetermined number increases according to how many times the retransmission signal has been tailed to be received by a receiving user. The transmitting apparatus further includes a multiplexing section that generates a multiplexed signal by multiplexing the predetermined number of spread signals and other user signals, said other user signals being signals to be transmitted to users other than the receiving user. In addition, the transmitting apparatus includes a limiting section that limits the predetermined number not to exceed a maximum number, wherein, the maximum number is determined according to how many other user signals are to be multiplexed together with the predetermined number of spread signals in said multiplexing section and a transmitting section that transmits the multiplexed signal to the receiving user.

Applicant's independent claim 15 recites, inter alia, a spreading section that generates a predetermined number of spread signals, each of the predetermined number of spread signals being generated by performing spreading processing on a retransmission signal using a different spreading code, wherein the predetermined number increases according to how many times the retransmission signal has been tailed to be received by a receiving user and a limiting section that limits the predetermined number not to exceed a maximum number, wherein, the maximum

number is determined according to how many other user signals are to be multiplexed together with the predetermined number of spread signals in said multiplexing section. These two components, specifically the spreading section in conjunction with the limiting section are novel/non-obvious over the prior art. Yamada discloses spectrum spreading modulators for generating diffusion codes mutually orthogonal with parallel signals (figure 2, paragraph 94). Das teaches providing more or less code multiplexing based on the number of retransmissions (column 4 lines 10-25). Okamoto (relied upon in previous communications) discloses reducing the number of multiplexed data as the number of NAK signals increases. In other words, as the retransmission increases, Okamoto reduces the number of multiplexed data (column 13 lines 55-60). Yamada, Das, and Okamoto disclose certain portions of applicant's claimed invention but fail to teach a spreading section that generates a predetermined number of spread signals, each of the predetermined number of spread signals being generated by performing spreading processing on a retransmission signal using a different spreading code, wherein the predetermined number increases according to how many times the retransmission signal has been failed to be received by a receiving user and a limiting section that limits the predetermined number not to exceed a maximum number, wherein, the maximum number is determined according to how many other user signals are to be multiplexed together with the predetermined number of spread signals in said multiplexing section. Furthermore, one of ordinary skill in the art would not have arrived at applicant's claimed invention by relying on Yamada, Das, Okamoto and/or the prior art. As a result, applicant's claim 15 comprises a particular combination of elements, which is neither taught nor suggested by the prior art.

Accordingly, applicant's invention is allowed for these reasons and applicant's amendments, arguments, and appeal brief.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
